

Jason Lim

Cloud DevOps & Infrastructure Engineer

Singapore · (65) 9126 9863 · ltr.jason@gmail.com · linkedin.com/in/ltr12345 · jasonltr.com

Cloud DevOps / Infrastructure Engineer with 4+ years across AWS and Azure, including Government Commercial Cloud (GCC). Kubernetes (EKS, ArgoCD GitOps, App Mesh), Terraform IaC, and CI/CD for application and Databricks data platforms — a reliable operator focused on correct, resilient delivery.

01 SKILLS

Languages	Python, SQL, Bash, PowerShell
Orchestration & IaC	Kubernetes (EKS / Fargate), ArgoCD, AWS App Mesh, Docker, Terraform, Ansible
CI/CD	GitLab (SHIP-HATS), Bamboo, Jenkins, Octopus Deploy, Azure DevOps
Cloud	AWS, Azure (incl. Government Commercial Cloud)
Data & Observability	Databricks (Delta Lake, Unity Catalog), PySpark, ETL; CloudWatch, monitoring, RCA
OS	Linux (Ubuntu / CentOS / RHEL), Windows

02 EXPERIENCE

NCS Pte Ltd Cloud DevOps Infrastructure Engineer

May 2026 - Present

GovTech · HSS (Hosted Self Service) cloud services platform

- Build and own the Terraform Infrastructure as Code and GitLab (SHIP-HATS) CI/CD that provision the Azure GCC integration backbone — Logic Apps, API Management, App Gateway, Service Bus, Functions, Storage — for a self-serve platform that abstracts day-2 cloud operations behind ITSM.
- Provision cloud resources and write per-module deployment pipelines as teams onboard; Logic Apps expose APIs bridging Azure Resource Manager with JSM (Jira Service Management), so module owners build workflow/function logic on the automation instead of managing infrastructure.

Infocepts Pte Ltd Cloud DevOps Infrastructure Engineer

Apr 2025 - Mar 2026

Ministry of Social & Family Development · MSF Datasphere (Databricks)

- Built platform-as-code (GitLab CI/CD, Terraform) for the MSF Datasphere Databricks lakehouse (Delta Lake): automated Unity Catalog access, Databricks job/resource permissions (ACLs), and multi-environment cluster provisioning with group-based (RBAC) access control.
- Ran the source-control and CI/CD workflow that let 6 data engineers promote pipelines from non-prod to production across 3 live data marts (CSV, Excel, SFTP) on AWS GCC; performed EC2 Linux patching, resolved security/compliance findings (RCA), and troubleshoot PySpark (Parquet) failures.

Mercer Cloud DevOps Infrastructure Engineer

Jan 2024 - Mar 2025

Darwin · HR Benefits App

- Supported daily build and deployment operations across Jenkins and Octopus Deploy CI/CD pipelines (log-based triage and re-runs); automated operational tasks with PowerShell, Bash, and Python and monitored AWS EC2 and VMware vSphere infrastructure.

NCS Pte Ltd Cloud DevOps Infrastructure Engineer

Jun 2022 - Dec 2023

Ministry of Health · NPHC (National Platform for Healthcare Claims)

- Set up AWS EKS Fargate clusters and ArgoCD GitOps across 4 environments (dev, UAT, staging, prod; split over two AWS accounts) for a ~6-service microservices application, using Terraform modules.
- Configured AWS App Mesh (Envoy sidecars, wildcard-cert pod DNS) for pod-to-pod mTLS and validated inter-service connectivity; set up CPU-based horizontal pod autoscaling.
- Operated a Git-manifest release and rollback flow (image-tag commits via ArgoCD auto-sync) with CloudWatch monitoring; supported an agile scrum team of 10.

Generation Singapore Cloud DevOps Trainee

Jan 2022 - May 2022

Foundational cloud and DevOps training: Linux, Python, Bash, Git, Docker, Ansible, and Terraform.

Shopee | Keppel Logistics Non-Tech Roles

Jul 2019 - Nov 2021

Automated collection of 500+ web profiles with Python and Selenium (headless, human-like throttling) to study competitor hiring patterns; built ETL data pipelines (SQL) and led a warehouse operations team of 18.

03 EDUCATION

Nanyang Technological University

Master of Science, Supply Chain & Logistics — GPA 4.69 / 5

Aug 2014 - Dec 2018

Bachelor of Engineering, Aerospace Engineering — GPA 4.28 / 5, Second Class (Upper) Honours

Nanyang Scholarship Recipient

04 CERTIFICATIONS

GitLab Certified Associate · Microsoft Certified: Azure Fundamentals (AZ-900)

2022
